Monday.

Ward. Feb. 13. 1854.

Mal presentations. In face presentations we have the cheek or malar bone. The face is often so much swollen after as to be very difficult to distinguish, but the bridge of the nose will distinguish the presentation. Breech often more frequently than any of the complex presentations or preternatural labors. How to distinguish it, ^{the best} among the indications diagnosing the presentation is the discharge of meconium. Six positions of the breech support the perineum. Worst form of presentation the pains stop. Chord generally presents where there is a large quantity of water & by a sudden discharge it presents.

Humphreys.

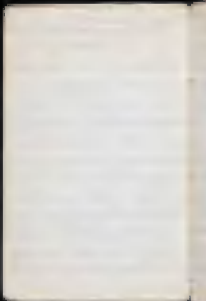

Gastritis. is not of very frequent occurrence. Symptoms. violent burning pain in epigastrium, dyspnea, & contact or motion greatly affected, violent heat, thirst, & vomiting of acid.

The first part of the paper is devoted to a general discussion of the problem of the origin of life. It is shown that the problem is one of the most important and most difficult in the history of science. The author discusses the various theories of the origin of life, and shows that the most plausible is the theory of spontaneous generation. He then discusses the evidence in favor of this theory, and shows that it is supported by the facts of the case. The second part of the paper is devoted to a discussion of the problem of the evolution of life. It is shown that the problem is one of the most important and most difficult in the history of science. The author discusses the various theories of the evolution of life, and shows that the most plausible is the theory of natural selection. He then discusses the evidence in favor of this theory, and shows that it is supported by the facts of the case.

Conclusion

The author concludes that the problem of the origin of life is one of the most important and most difficult in the history of science. He shows that the most plausible theory of the origin of life is the theory of spontaneous generation, and that the most plausible theory of the evolution of life is the theory of natural selection. He then discusses the evidence in favor of these theories, and shows that they are supported by the facts of the case.

head, region of the stomach swelling, epigastric
thrusts or even stools are suppressed.
death sets in from singultus delirium, sublethal
anemia, this form generally from phos. &
Mild dyspepsia, pain in epigastrium, prostration,
Biliousness, passing up to lymphatic nodes
in abdominal cavity after vomiting or
eating, there is an exacerbation of the dyspepsia
hot face & hands re which continues until
the digestive system is done with
pyrosis, eructation, flatulence, which
may be mucous from coffee grounds or
pure blood then vomiting are very
annoying, fever, syncope or stools, little
usually or may be wanting. Disen-
gerally common, with a chill bowels
constipated. Sympathetic symptoms.
headache, pain in limbs, cough or a
shaking, goes farther cough, emaciation
slight fever, may be consummate (Chronic)

Often only a single symptom only indicates the
presence of the disease. & after preparation of the
stomach sets in with the first indication
Symptoms are all worse during digestion
Vomiting may be absent, or may only set in
during the latter stages.

Termination In the first four death may
soon terminate the disease may terminate in
diarrhea which may last a long time
or may terminate in retention of the stomach
Cancers are numerous terminations, or from
weakness from pressure, disease of the stomach
when the body is overburdened, from suppuration
rupture, degeneration &c

Prognosis more people prone to danger
than do acute form less dangerous when the
fluids take into the stomach are retained a good
temperature favorable.

Treatment must be referred to the Cancer
metastasis patients & must be referred to

Acute symmetrical pain from ice dark red
And on last seen from can. redder feet
Widespread burning pain anguished
And end. From danger. Some fever
and yellow tongue

Both cerebral symptoms decline
Thyres preferable.

Canth. great sensitivity. cold. pressing
on pit. during pain passing off and symptoms
appearing.

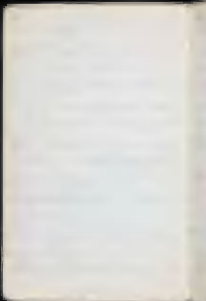

Thyres. mild form. each slightly distinct
movement one of blood. some of the
more on motion or contact.

Thyres. quite insensible. dead

Spec. violent hostility, dera. some
cold drinks

Thyres danger of solution. violent
being distinct to contact more
than strokes

Phos cold stomach or burning cold

of the great intestine.

Pulse, from gastric derangement from food
benad, cold weak great thirst cold sweat &c

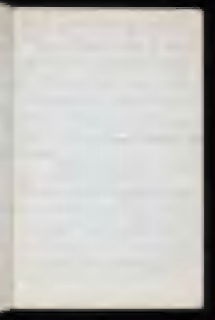

A frequent serious condition are difficult
digestion vomiting of decayed dark matter
such symptoms may long continued & the
patient not notice of the condition swelling
of the epigastrium emaciation & hectic
render the fact more prominent.

Nux very efficacious in this condition also

Its in more advanced stages. Carbo can vomit
contum.

Enteritis. may be more frequent
Iller colonitis more frequent forms.

Phlegmonous enteritis violent penetrating pains
in umbilical towards right iliac region
pain fixed. patient lies on back legs drawn
up - stretched up pain greatly increased by
contact, abdomen hard distended greatly
Constipation, vomiting green mucous bloody
or green matter, tenesmus. Sidam

open with a violent chill. Suffered general
anemia & unequal temperature of the surface
this is characteristic of all intestinal disorders
pulse small, head fever & throat swollen
the extremities are cold. anginae as a sign
prognosis by intestinal perforation. Death
is not general the peritonitis remains free
Acuter signs quick course, remission
of pain crises by union of feculent matter
in the peritonitis are favorable symptoms
Tachypnea occurs & chills, or indications
if former the collapse comes on suddenly
in fatal week it comes, height of all
these suddenly disappear & the patient feels
well when extremities become cold by peritonitis
coma or death soon follows
Fever general with it.

Treatment. Food must be given till bowels
not constipation here is natural and the
bowels are not to be interfered with

So long, as there is no violence, there will
be no swelling, no urine discharged, if
both inflamed. if one little discharged
urine just blood & albumen later on
acid of albumen, pus & purulent
matter discharged after another vomiting
discharges small after pains. White
Coated tongue Constipation & pain in
the intestines Convulsions or rather
Comatose delirium. While first
skin becomes hot & dry, urine odor
pale small & contracted, during passage
patient lies on back and when sickly
repeated attack of Chills & thirst.
Chronic
Pain in loins wanted, pressure on the
one side of the spine causes pain, those
of lime ammonia & magnesia found in sediment
of the urine. The acid in urine gives place to
a acidity. Symptoms of resolution
around the testis &c. without pain

It terminates in suppression, irregular
passage in general typhoid symptoms
but few tendons. typhoid or putrid typhoid
Pyelitis or of the mucous membrane
generating from renal calculus. hematuria
nephritis & discharge of calculus. In
double the secretion suppressed.

This may find its way into the ureter or
in the duodenum stomach or to the lungs.
Disgrace with nephritic colic. some you
fall, riding, red, white & yellow & in
not continuous, faintly & terminate in discharge
of renal calculus, follicle present, discharge
at urinal not so constantly suppressed.

Lumbago. pain in both lumbar region
when it is to wander & rheumatic character
of the pain, no feeling of tension, the
thigh is sometimes. psoriasis sacro-
lumbal tendons, dorsal side absolute
& involving the side especially (pump)

inginal swelled, & some lower extremities.
Inflammation of spinal cords, paralysis of spine
and unable to raise body upright.

Contracture of bladder very frequently the
effects of serum and hence such. The disease
results from strong contraction, with
inflammation of the bladder with induration. On
least of the difficulty.

Cause. adults, rarely children.
from calculi, distention of vesiculae, mal-
cure, shock, contusion, cold, &
irritating substances such as cantharides
calculus stone, enlarged prostate
in kidneys, secondary effects. Arthritis
which latter has a peculiar character.
Prognosis. generally favorable
when relieved but when plan (prose)
unfavorable degeneration of the bladder
takes place.

Treatment Canth & other eating

paroxysms of pain, severe
aching, pain, not able to sleep
back aching, burning, pains towards the
bladder, white, pains.

High sulph sudden removal of food.

Pulse in females, temperance, change, men-
strual, etc. - disordered.

Stomach from piles or from spirit
burns in lumbar region

Constit neural to pubic pain, large
apex, etc. - the food.

old long standing ulcerations lyc. alk.
phos & zinc also nit acid

Diabetes. disch. of large quantities

Exposition

The first part of the book is devoted to a general survey of the history of the French language, from its origin to the present time. It is divided into three periods: the first, from the beginning to the reign of Charlemagne; the second, from the reign of Charlemagne to the reign of Louis XIV.; and the third, from the reign of Louis XIV. to the present time.

The second part of the book is devoted to a detailed examination of the French language, in its various branches, as Grammar, Syntax, and Rhetoric. It is divided into three periods: the first, from the beginning to the reign of Charlemagne; the second, from the reign of Charlemagne to the reign of Louis XIV.; and the third, from the reign of Louis XIV. to the present time.

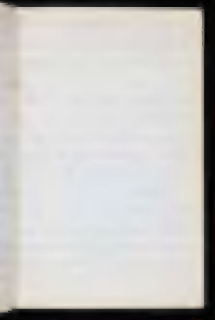

The third part of the book is devoted to a detailed examination of the French language, in its various branches, as Grammar, Syntax, and Rhetoric. It is divided into three periods: the first, from the beginning to the reign of Charlemagne; the second, from the reign of Charlemagne to the reign of Louis XIV.; and the third, from the reign of Louis XIV. to the present time.

The fourth part of the book is devoted to a detailed examination of the French language, in its various branches, as Grammar, Syntax, and Rhetoric. It is divided into three periods: the first, from the beginning to the reign of Charlemagne; the second, from the reign of Charlemagne to the reign of Louis XIV.; and the third, from the reign of Louis XIV. to the present time.

The fifth part of the book is devoted to a detailed examination of the French language, in its various branches, as Grammar, Syntax, and Rhetoric. It is divided into three periods: the first, from the beginning to the reign of Charlemagne; the second, from the reign of Charlemagne to the reign of Louis XIV.; and the third, from the reign of Louis XIV. to the present time.

The sixth part of the book is devoted to a detailed examination of the French language, in its various branches, as Grammar, Syntax, and Rhetoric. It is divided into three periods: the first, from the beginning to the reign of Charlemagne; the second, from the reign of Charlemagne to the reign of Louis XIV.; and the third, from the reign of Louis XIV. to the present time.

The most indubitable evidence of the presence
of worms is the discharge of them from the
elementary canal. Worm diarrhoea
buffy faeces deeply discoloured
stercorites thin & cold quick pulse
blueish around eyes leucophlegma irregular
retention in the abdomen. Description of the
food is chosen, weak digestion elaboration of
chyle defective. Salivation brownish
stools irregular, white tinged, partly
ling. Hosts ^{mucous} evacuated as a rule. Death
symptoms from mechanical irritation.
Hard dry vomiting burning or scaly &
mixture in the abdomen perhaps this is
most violent when fasting salted food
or sweet, for I form relief. It is the
picking nose itching anus, twitching, flat
convulsions. Worm fever most common
form, more at night irregular in its
character, much diminished during the
hour, much increased.

Depressed appetite. During full Moon
& change during the Moon

Terminations rarely favor May cause
emaciation, weak digestion

Treatment, first put the ^{patient} on a regimen
suitable to the disease. Ment. or such
substantial. Salt food. (pies candies or
pastries are to be done away with) Ment.

Part masticated & excreted softening solid & spread. with stimulus the pyloric & lower portion deep & stage the case is one of membrane only somewhat softened. 2. mucous & bilious mucus. Muscular tissue involved. 3. tissues all change into homogeneous pulp perforation takes place.

The softened tissues are frequently colored. Calves emaciated &c. Is dilated & seen in stomach. stomach distended with food. Symptoms, vomiting, diarrhoea, mucus, emaciation. Children. Disease put along & food, in acute form terminates in

The first part of the paper discusses the importance of the study of the history of the English language. It is noted that the English language has a long and rich history, and that the study of its development is essential for a full understanding of the language. The paper then goes on to discuss the various factors that have influenced the development of the English language, including the influence of other languages, the influence of social and cultural changes, and the influence of technological advances. The paper concludes by noting that the study of the history of the English language is a fascinating and important field of research, and that it is essential for anyone who is interested in the English language to have a good understanding of its history.

2 to 3 years, pale, quiet, thin, large stomach
distended, green, repetitive vomiting, frequent
discharges of water, respiration oppressed.
skin cool, cough, green sallow, a white
sublingual, old expression of countenance
Cerebrum very second old seen
left acute jaw 6 or 8 days mortality
& prostration, green or black blood, ends
stools greenish with globs, remainder
of the body, neck & face, curdled
child's lies in a stupor, condition
but easily, recover
3 or 4 days, cough, emaciated
and thin, but seen.

Vomiting one of the most constant
symptoms excited by anything taken
into the stomach, & even only shortly
before death, faint & exhausted, after
vomiting, white globs threads & jets
of the contents appear, no vomiting.

Diarrhoea long before disease sets in &
never wanting. acid & dirty clay green
and substance mucous. little disch-
arged from prostration worse from any stop
solid glutinous. Tendency to inflation
of the stomach kept present thru any of the
other symptoms. Collapse never
wanting, & stands in no relation to the
evacuation, face red at first, expired air
is cold. Fever at first at the head
character ^{rule} denotes in the progress but gen-
erally wanting - thirst great, & is in
comparison to the progress of disease
& the drink is thrown up. Cough is present
when the disease advances more slowly
sympathetic affection of nervous system

cries, no body, head firm pillow to
grasp the head & writhing the lower
extremities is poor Hydrocephalus

Causes meaning. & after to 1 at the breast
Improper diet. also the sympathy
of the stomach in colds from
teething: epidemics endemic &
Late in spring & summer. Softening of
the brain has been found in post mortem
examination of this disease.

Diagnosis.

Prognosis not unfavorable in majority
of cases.

Treatment. much to be done in nursing
which should not be done suddenly, & should
not be weaned in summer time. Milk
fresh from cows given while yet warm
Find out what the child can eat.

acon lay calce ac. & tart emac must be
important. acon little. Hygiene & general
nursing, watch quick pulse & sleep.

Calce rectatum scrupulous dentition by
dyspepsia & stool, green gray stool.

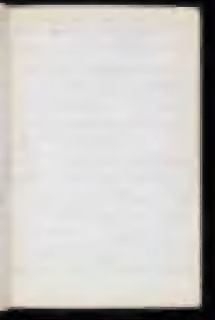

cadaverous smell hardly hands & all of
the face. That face old & cracked, perhaps
very dry skin. pale scanty hair
3 lit.

Faint smelt. a gregarious - half
slender & taper half. close eyes but
nearly & protrude somewhat. head
not yellow. throat white. abdomen
seems to be covered with small
4. or 6. or 8. or 10.

Bay after noon mostly a dense
outlet, rain daily for 24 hours. by
As. rarely hear of much disease.

I see a mild case. loose evacuation
yellow green fermentive stools. pain
in the loins at the beginning soon relieved.
2nd stage.

Rhine down at the throat. happy throat
shredding dry discharge
Scale thick & green. lid of eye

Verat. violent prograde & painful stools
brown, stercoraceous, soiling the rectum

Diarrhoea incrim flow rather
tenuous, a symptom merely of some
morbid or two other morbid diseases
Billous, mucous, watery, stinky, or
bloody, putrid, sometimes
clay colored, or dark adipose
mixed with last called quartan

most common in childhood from
teeth, etc. Also in races more subject
to it, from indigestion, worms, irritation
or inflammation of mucous membrane. Child
suffers at times from diarrhoea
Dysentery is purulent, the prostration
is mucous often bloody

Terminations - never kills any body
as long as it is clean

Treatment remove the cause if
possible, diet, etc. Chron. in

man arise from disorder of the bowels
Ans. peculiar & accessory symptoms the
character of the stools prostration dry
skin debility, diarrhoea more or less
after drinking

Chamae stercoracea

Chamae brown purple & black undigested

Dube large & granular mucous

Ferrum undigested black & brown

Spec simple diarrhoea, male

stooling or flatulent stools marked

debility, desire for food, but hunger

Muc bilious form watery bloody

green or like str. eggs, numerous

chills, want to remain long in stool

pale changeable stools, all sorts

of stool, black, brown, col-

or, at night

Rheum Sour stools.

Secale, fermented and fermented discharging

Luph. stalks very frequent & especially
at night in fine light colds in mouth
Calony also

phadoc in mouth & throat

Mercur. & rebutus.

Tonic mer

nux chirac & also subph & Calo.

Williamson

Lactuca verasa (poison lettuce). &
most violent in form.

Lancum album herb. plant
(poison nettle) & dry glass season

Laura cerasus ^{hum.} (cherry laurel)

greenish linatum leaves used.

cyaneis ^(dark blue) thymoid form. hoarseness.
cough actin sat com in large stock ^{frank}

Leodum pelastum (rose mary)

on a leaf. more sun on dist. to
leaves gathered during flowering, scound

Phenanthus affinis especially in the River.
Lobelia cardinalis greenish tincture

Does give a cure either perhaps the root or dried
seeds or leaves used with whole plant
domestic affections. perspiration. tearing of
the eyes. Patient hungers after eating
Lupulus humulus. (common hop) females
buds containing pulchre seeds. & redish brown
tincture. Dose ʒss steeped in the red.
slim pulse. coffee best antedote

Manganum. (manganese) existing in
grey color. should be prepared by trit.
Dose ʒss

Himantus trifolatus. (black bean)
grows in Europe with many leaves
gathered in autumn proper time dry plant.
Skiffetis pale coat or starch.

Mercurialis perennis (drop mercury)
small plant with dicotyledonous leaves
in flower. head large. oblong

Arillephalum actiles (yarrow) =

Totum hemmorrhage no bleeding of
the uterus.

Musculus. muscle. (amine puerperae)

No was females hysterical. shortly, & is
out of any symptoms

Nickelium. (carbonate of nickel) tart.

Nux moschatica (nutmeg) 20 to 30 grs
chose the smaller nuts pulv. & added
alcohol contains an essential oil,

nerveous affections gastric affections
limb on being laid on feels numb. from rest

Oleander. & leaves. dark green tint.

Oleum jecoris maris (cod liver oil)
yellow light color.

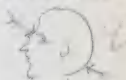

Oasis galifolia (redish yellow bark)

Petrabium. (rock oil) from by Hark
sick head aches, with flesh, before with
eyes the appearance of heat, pyrexia
sea sickness (see 4 p. 10). achillean

Leucorrhoea. the light-colored in drop data will
cure up gonorrhoea, rather to administer
it, this was told me a secret I paid \$2.50 for
I do not charge you that much (naptha)

Phelandrium aquaticum

Phytolacca decandra (poke) decandra
add virginia. neuralgia, pain  the
the neck, cancer, shorty pulmo.

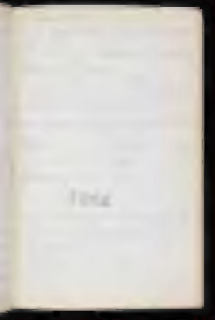

symptoms or right side leaves & root
used.

Petroselinum (seeds) *P.* common parsley
curing disease of children.

Pinus sylvestris + +

Ward.

Organic diseases. tumors, ulcerations
fungus growths, which the most famous is
in the California excelsior. makes
bold advance extending & spreading
in simple rule, or rather as dragging

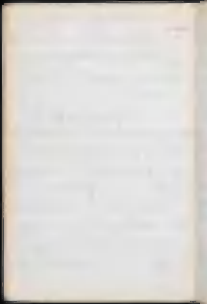

also in all cases, in back & hips. more to
erect patient better lying down at night.
Displacement more at night.

Examine the discharges carefully.

Caps. Bacilli. con. as & sulph. lye test they
out as, and all the comedi's apperises
I got good results for flatulency
as Hydrogen when to be found.

Stomptoreys

Peritonitis rarely attacks both surfaces
when this occurs the disease more or less
navigates of the intestine. Anteford
Symptoms. febrile chill or it may com
on in a developed form in one stroke
pain often so violent patient can't walk.
the head strikes every motion, and the
increases the pain. Bacilli Stercor
greatly increase the pain, abdomen
retards just stops but over the
other side advances. Mould & appetite

the surface is nuptial, older beds
forming, change present as one flowing
thrust. Condensation or may be mucous
discharge, clay like, pale and more frequent
in the first stages than natural path become
small thready, fine pointed, quantity &
occasional delirium. Pericardium empty
from gas in the abdomen

Treatment. Diet. apply cold water
acon. pulse suppressed (bale by more)
bile yellow best, cerebral symptoms
Bog. extension exudation or the periton
constricts the diaphragm
(men) distended abdomen
(men) chronic (bills)

The extreme cases (Acute)
Constipation

Two conditions first constipation proper
little or not after refusal of solid food
2d Obstruction or morbid accumulation

Latter - the light of accident.

Rhematis not more by new species flat
peels large little if fulas but point. Sulphur Chlor

Williamson

(Th)

Platina. used by trit. R

Supp table in disease of females

Suppression of menstruation of eriguate

Symptoms more evening rest & marred

Salivation of pregnancy.

Platinum metallum (lead) trit

Chlorosis with constipation ileus,

& spasmodic vomiting. Scibela

many disease mucous deposits.

Ranunculus bulbosus, (buttercup-golden daisy)

Rheumatic affections. neuralgias so.

several species of flamula. Scleratus V

Ratonia (bark of the root) Peruvian

dark red & Diarrhoea hemorrhages.

Rheum palmatum (Rhubarb) Chlor

rhussion. Select heavy pieces & Syrizon

color. particularly adapted to color of chlo-
sours greenish or fermented stool. also the
diarrhea of pregnant females. feathery

Rhododendron cremanthum

young, rheumatic subjects worse or better
during change of temperature

Sabina - O leaves & young branches

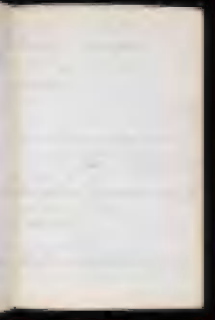

menstrual colic, pain & fullness of vagina
sterility too cold menstrual (young)
hemorrhage, ophthalmia, or cataract

Sambucus nigra (elder) European
blossoms dirty yellow & inner green
bark used, Althaea Milaria leaves
coughs

Sanguinaria Canadensis, organs of
respiration & general debility.

Sassaпарilla (orcinia) in country &
rare in Europe) pain in kidney bladder
etc. piggy. asthma

Scilla Peruviana (spurred yz) seeds
growth of the yz. & yellow's red,

of ... which ...
 ... present ...
 ... surface rough & scaly ...

1875

1. The first part of the book is devoted to a general introduction to the subject of the history of the English language. It discusses the various factors which have influenced the development of the language, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

2. The second part of the book is devoted to a detailed study of the history of the English language from the beginning of the 15th century to the present day. It discusses the various stages of the language, from the Middle English period to the Modern English period, and the changes which have taken place in the vocabulary, grammar, and pronunciation.

3. The third part of the book is devoted to a study of the history of the English language in the United States. It discusses the various factors which have influenced the development of the American English, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

4. The fourth part of the book is devoted to a study of the history of the English language in the British Empire. It discusses the various factors which have influenced the development of the English in the different parts of the Empire, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

5. The fifth part of the book is devoted to a study of the history of the English language in the future. It discusses the various factors which may influence the development of the English in the future, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

6. The sixth part of the book is devoted to a study of the history of the English language in the present day. It discusses the various factors which have influenced the development of the English in the present day, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

7. The seventh part of the book is devoted to a study of the history of the English language in the future. It discusses the various factors which may influence the development of the English in the future, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

8. The eighth part of the book is devoted to a study of the history of the English language in the present day. It discusses the various factors which have influenced the development of the English in the present day, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

9. The ninth part of the book is devoted to a study of the history of the English language in the future. It discusses the various factors which may influence the development of the English in the future, such as the contact with other languages, the internal changes, and the influence of the social and political conditions.

Urticaria - a little tag

Urticaria - containing little bags or bladders

Urticaria - to be in the medicine

Ecstasy - a medicine

Ecstasy - a medicine

Way - error in doctrine

Chastice - in disorder

Incongruous - inconsistent

Manducate - to chew

The first part of the paper discusses the importance of the study of the history of the United States. It is pointed out that the study of history is not only a means of understanding the past, but also a means of understanding the present and the future. The author argues that the study of history is essential for the development of a nation and for the progress of the world.

THE HISTORY OF THE UNITED STATES

The history of the United States is a story of growth and development. It is a story of the struggle for freedom and independence, and of the pursuit of the American dream. The author discusses the early years of the nation, from the time of the first settlers to the present day. He points out the many challenges that the United States has faced, and the many ways in which it has overcome them. The author concludes by stating that the history of the United States is a story of hope and optimism, and that the future of the nation is bright.

Patrimoine - inheritance
Pellucidity - lowest degree of clarity
Pellucid - to thicken
Pension - act of selling
Beneficial - acting for profit
Benign - pardonable
Berberity - use of many words

What are some of the signs of pregnancy?
It is to be attended by changes in appearance & conduct.

How long does it continue?

How long does the foetus continue?

When does the foetus first appear from mother?

At what time does the foetus begin to breathe?

And of the liver?

How is the blood returned from lungs?

Through what vessel is it then conveyed?

How does the secretion of milk take place?

Female.

What is the use of the ovaries?

Does the liver have a secretory?

Does any?

What animals have a stomach?

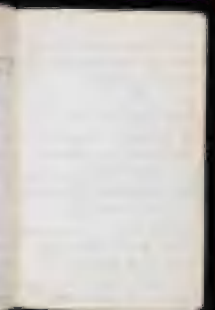

Does a lion?

Boatley

What do you understand by a stomach?

What is a compound stomach?

What is a compound stomach?

W. E. D.

Impress

How is it obtained?
What is its color?
How is it prepared?
What is its medicinal use?
Where is it obtained?
What is its characteristic odor?
How is it obtained?
What is its medicinal use?

How many feet water?
How many days ground?
What is the water?

How is it formed?

What prevents your growing the potato?

Williamson

What are you the best of and most or drawing portraits?
What is this? (showing me a piece of paper)

How is it prepared?

What is a barometer?

How would you picture a comet?

How does that picture it?

Although what agency is London pictures
What impositions entered in a school

How would you name the impositions?

What is the composition of ammonia?

What is the composition of water?

What is the weight of water?

What is shown?

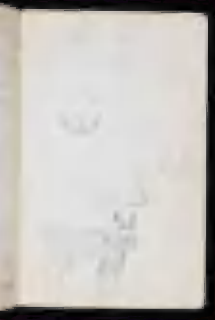

What is shown when shown?

Sus in suspense
